Besse Medical

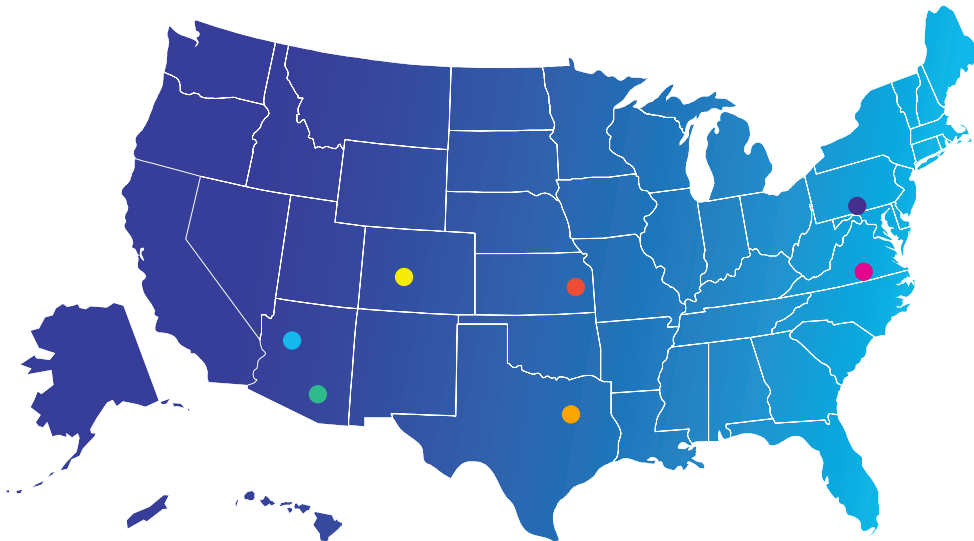

Cubixx[®]MD

Inventory and
workflow excellence
for your vision practice

The system driven by you

Over the years our customers have given us great feedback about what they want to see in CubixxMD. We have a full pipeline of enhancements and updates, guided and refined by what is important to real doctors and real patients. Many of our innovations have been prioritized due to customer requests: support for multi-dose products and the ability to record where on their body a patient receives a dispense, to name just two.

- "We love CubixxMD – it's a smart and convenient way to manage our dispenses, and the support from Besse Medical is friendly and efficient."
- "Initial setup and interfacing with our EHR was quick and simple and it couldn't be more user friendly."
- "It's very intuitive and user-friendly, and the automation gives us the reassurance that we are reducing the chance of error in our practice."
- "It integrates seamlessly with our clinical workflow."
- "We are able to reconcile all meds with accuracy now!"
- "It was the only system that removed the manual process of logging in inventory."
- "It records and tracks everything, saves a lot of time, and makes our end-of-month evaluations much easier."

Excellence for each team in your practice

Standard inventory management systems

Many companies can offer a basic inventory management system that tracks product from ordering to delivery, but CubixxMD does so much more than that! It's not just a matter of counting inventory, it's a matter of supporting every aspect of your retinal and ophthalmology workflow.

The CubixxMD difference

CubixxMD supports all the teams in your practice: the clinical team, purchasing, admin and finance. The front office and back. Product ordered from Besse Medical and our partners arrives pre-tagged, ensuring that it's tracked every step of the way. Every order can be received in with a single scan, and every dispense can be scanned to an individual patient.

It tracks product at the physician and patient level so it reduces the risk of unbilled products or treatments. You will have exactly what you need for your upcoming patient schedule and can ensure it's billed appropriately.

Integration puts CubixxMD at the heart of your practice

CubixxMD integrates seamlessly with your practice management, electronic health record and electronic medical record systems, transferring product data between them in seconds. You can easily compare dispensed pharmaceuticals to charge and payment transactions, ensuring you never miss a charge. The comprehensive range of reports in CubixxMD gives you the information you need in an instant.

Every dose, every dispense, every patient

CubixxMD is specifically designed for your workflow, allowing you to manage the logistics of your business across multiple locations with less time and effort. With refrigerated cabinets, a convenient app and desktop scanning, intelligent integration and a range of essential reports, CubixxMD gives you the ultimate flexibility in dispensing and tracking product. Every dose, every dispense, every patient.

Practices across the country are finding that with CubixxMD you have greater control over inventory and information, so you can focus on what matters most: your patients.

Being able to receive in product with a single scan – no need for manual counts or data entry

The billing accuracy report helps make sure you get full payment for the doses you dispense

Purchasing

Making sure the right products are in the office when patients need them

See which products are needed in each office at a glance.

Receiving orders is a breeze. Just put into your CubixxMD cabinet or scan the barcode on the shipping cooler and every item is added to inventory.

Move product between offices just as easily; manage product at multiple locations with less time and effort.

- Track low inventory
- Track expired product
- Set your own custom PAR (Periodic Automatic Replacement) levels
- Quickly view items falling below PAR values to trigger reorder
- Chart drug usage over time

Clinical

Tighter controls over the movement and dispense of medication

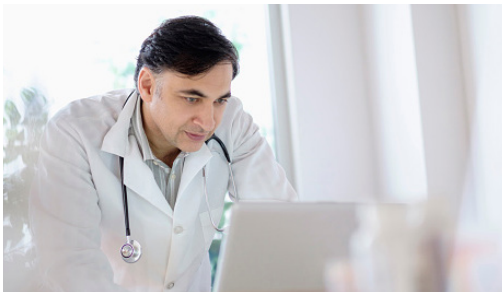

Recording a dispense is simple. Just pick up the tablet and select the patient from the day's schedule.

CubixxMD records the specific lot the patient receives and even records the administration location. This is much quicker than typing out the details on a laptop, giving you more time to focus on your patient.

- Patients spend less time waiting for treatment
- CubixxMD helps you identify and resolve billing mistakes
- Our predictive product ordering helps you order only what you need

You get broader visibility into on-hand inventory, deeper insight into your spend on specialty product, and greater peace of mind.

Admin location lets you record where on the patient you apply the drug

Comprehensive training, full user documentation, and friendly support staff make CubixxMD a pleasure to use

Finance

Maximize reimbursement from all payers and reduce loss

CubixxMD boasts a range of financial reports which are easy to run and can result in tangible savings for your practice.

All the information you need for correct billing is there, including NDC codes and date of service.

- Document the value of the current inventory at the end of every month, quarter, or year
- Highlight valuable product due to expire
- Revenue cycle management
- Identify dispenses not yet charged to the payer and discrepancies in product used versus billed

Administration

Better analysis through integration with PM and EMR systems

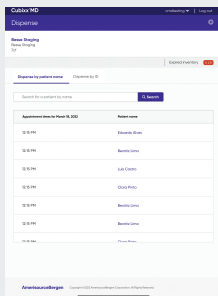

CubixxMD allows you to reconcile your inventory counts with the actual product in an office and then easily correct any discrepancies.

Training for all users is quick and simple, and the friendly CubixxMD support team is available to answer any questions.

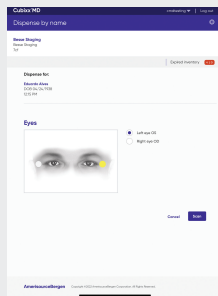

- Reconcile all specialty drug used and billed over the last week, month, or year
- Easier to work out the practice budget for this year and analyze the previous year
- Audit staff compliance

Receiving and dispensing product with ease

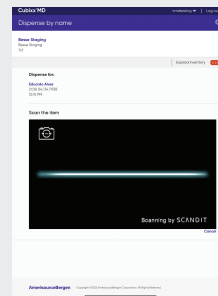

Using the CubixxMD tablet app

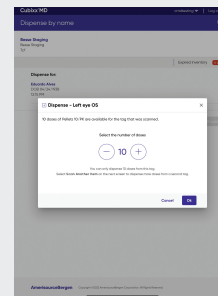

The app integrates with many PM and clinical record systems, allowing you to easily select scheduled patients when dispensing.

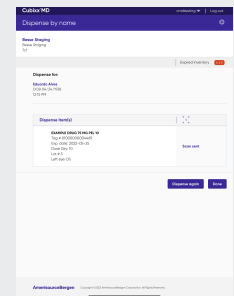

Select the administration location with a single touch.

The fast in-app scanner automatically scans pre-tagged products purchased from Besse Medical or one of our partners.

If the product is multi-dose, you can select the number of doses you are dispensing. Your inventory is updated instantly.

The app confirms dispense for that patient, updates the CubixxMD portal, and gives the option to dispense again.

When you join CubixxMD, we'll discuss how your practice might benefit from the CubixxMD app. We can send you devices to access the app, letting you scan products to instantly update your inventory in the CubixxMD portal.

- Scan and dispense product on the go, anywhere in your office
- Link a patient to a product in just seconds using our lightning fast in-app scanner
- Specify which eye a dispense is for
- Dispense any serialized and lot-tracked product (refrigerated, ambient and frozen)
- Move inventory between offices with ease
- Instant alerts for expired and dispensed product and useful product notifications in real-time
- Scan and reconcile inventory to ensure accurate and up-to-date product counts
- Receive entire orders in just seconds with a single scan. No manual counts, stickering or data entry needed (when ordered from Besse or our compounding partners)

Using desktop dispense and your PC

Don't want to use the app? No problem. You can get the full benefits of CubixxMD using your existing PCs. Dispense product to patient with the CubixxMD portal by using a handheld scanner or typing the serial number. Just as with the app, you can specify which eye a dispense is for.

And just like with the app, you can add all the items in a Besse Medical order to your inventory with a single scan.

The right CubixxMD cabinets for you

We offer two different types of convenient in-office cabinets, in three different sizes. The **barcode-scanning cabinets** offer greatest flexibility in how you physically handle product, whereas with **RFID cabinets** there's no scanning required, and you can easily transfer product between offices by moving from one cabinet to another.

- Refrigerated cabinets
- Electronic door lock
- LCD touchscreen interface
- Our experts work with you to choose the right cabinets for your practice

Harness the power of your practice data

CubixxMD can fully integrate with most practice management (PM), electronic medical record (EMR), and electronic health record (EHR) systems. This integration reduces your manual data entry, which improves accuracy and can help mitigate discrepancies between clinical systems.

Why is this integration so important?

Through the CubixxMD app or portal, you can select a patient at the time of dispense. Dispensing by scheduled patient ultimately allows you to compare the accuracy of the charge and payment data while also benefitting from advanced EMR integrations that cut down on manual data entry. Your practice administrators can easily compare dispensed pharmaceuticals to charge and payment transactions. This integration ensures you never miss a charge.

Our product- and therapy-specific integration takes automation to a whole new level by automatically inserting pertinent dispensed product and lot information directly into your patient's encounter record. The system virtually eliminates the need to manually track or log used product.

- Time of dispense interface – patients are listed by the scheduled hour
- The CubixxMD portal reports transactions and usage at the product, physician or patient level
- Charge and payment validation
- Reconciliation reporting, assuring the product is correctly billed

Meet our partners

Syringe tracking

Syringes obtained from our CubixxMD integration partners – Pine Pharmaceuticals or Leiters – arrive individually tagged and lot-tracked. No additional printing, labeling, or processing required.

Patient Assistance Program (PAP) integrated ordering

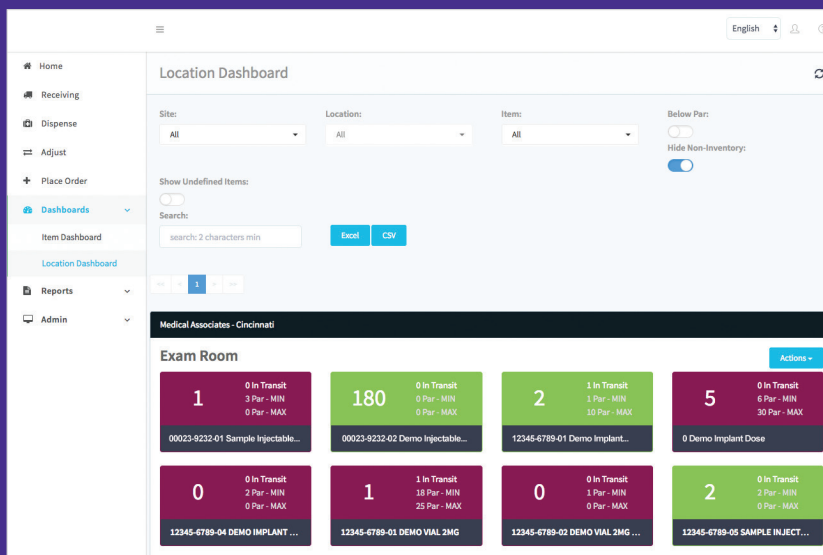

The EYLEA® PAP request process managed by Regeneron®'s EYLEA4U® program is integrated into CubixxMD, making it easy to identify PAP-eligible patients and to request EYLEA® PAP for those patients with the click of your mouse.

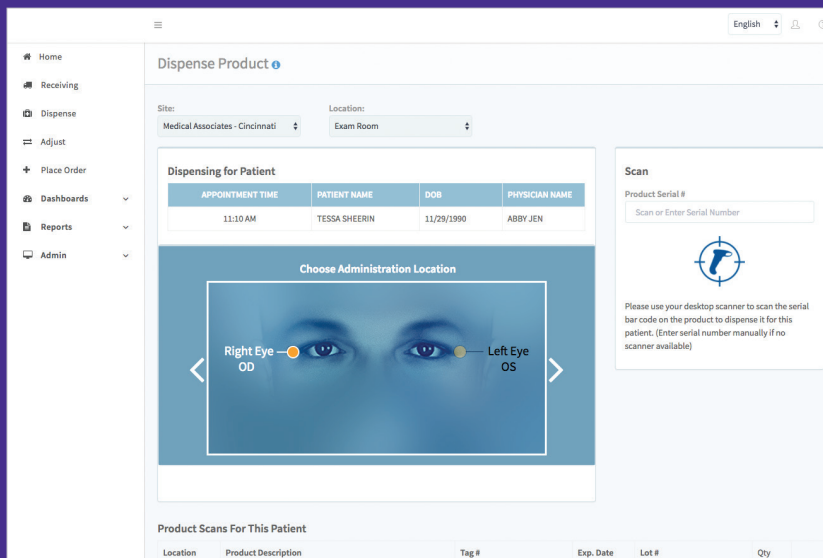

Temperature monitoring

Monitor temperatures remotely with our partner, Monnit®. Create excursion ranges, set alerts and review temperature history throughout all of your CubixxMD cabinets.

The CubixxMD portal: everything in one place

Whether you have one practice location or many, managing your inventory is easier than ever with the CubixxMD portal, a comprehensive resource with real-time tracking and reporting. The CubixxMD portal links product to patient to payment across one or multiple locations. Oversight and accountability becomes simple. Every user can be set up with log-in access appropriate to their role in the practice.

Top: You can view your inventory by location or by item

Bottom: Admin Location lets you record where on the patient a product is dispensed

View, manage and track product quickly and simply in the CubixxMD portal

A range of reports allows you to draw out the data you need

Think of the CubixxMD portal as your own inventory management hub. You can either see a high-level view or zoom down to the most granular detail. Whether you add product to CubixxMD via a cabinet, the app or handheld scanner, your inventory is immediately viewable. There you can place orders, analyze usage, and run reports. Because the product is tracked at the provider and patient level, it reduces the risk of unbilled products or treatments.

This comprehensive view allows you to analyze operational performance and uncover efficiencies across your practice. The system monitors inventory and product lot numbers and expiration dates across multiple locations or practices in real time. Color coding lets you see potential inventory issues. With easy receiving and lot tracking, you can quickly lot track drugs you purchased directly from manufacturers or compounders.

Key features of the CubixxMD portal

- Sophisticated reporting current inventory PAR levels and expiration date by product, incoming shipments, and much more
- Quickly see usage by office, physician, and date with customized reports
- Integrates with your PM system for billing and payment reporting, allowing you to identify discrepancies with charges, billing units, and products billed
- Advanced alerting and reporting system tracks low inventory, expired product, etc.
- Quickly view all locations / items falling below pre-set PAR values to trigger product reorder
- Reimbursement alerts can warn you if you are trying to dispense product for a patient too soon after their previous visit, protecting you from dispensing medication for which you may not be reimbursed
- Transaction analytics help you chart drug usage over time
